

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

Removing all the code that is double and replacing them with function

2. What parts of encapsulating your logic were hard?

Determining which code needs changing

3. Is abstracting the book preview a good or bad idea? Why?

Good because it helps other programmers understand your code and helps with the extending of the code but too much abstracting is bad because it can make the code vague and confusing
